

## Multimedia for every 1-DIN slot: the Xzent Moniceiver X-101BT

**If you want to retrofit a multimedia system in your car, you'll certainly be on the right road with the X-101BT. Xzent's new 1-DIN moniceiver looks convincing with its wide range of functions and a good price/performance.**

### BRIEF

All entertainment options in a single device: with the X-101BT, Xzent has brought out a versatile 1-DIN moniceiver which can easily be retrofitted in your car to provide a modern multimedia system. A great range of functions, high grade hardware components, and a first-rate build quality: just like with the new 2-DIN models, the X-101BT sets new standards as far as quality, features and price are concerned. Thanks to its built-in CD/DVD drive, USB port and SD/SDHC card reader, the X-101BT is perfectly equipped for playing all modern media and A/V formats. The comprehensive Bluetooth section allows convenient hands-free calling. All settings can be readily controlled via the large 17.8 cm/7" touchscreen.

### LONG

All entertainment options in a single device: with the X-101BT, Xzent has brought out a versatile 1-DIN moniceiver which can easily be retrofitted in your car to provide a modern multimedia system. A great range of functions, high grade hardware components, and a first-rate build quality: just like with the other new Xzent models, the X-101BT sets new standards as far as quality, features and price are concerned.

Xzent's moniceiver is a real multitasking unit. Thanks to its built-in CD/DVD drive, USB port and SD/SDHC card reader, the X-101BT is perfectly equipped for playing all modern media and A/V formats, including high resolution videos.

Interference-free radio listening pleasure is ensured by a high-sensitivity FM RDS tuner with DSP-based noise reduction, and numerous comfort functions. Naturally, this moniceiver also has good sound. The X-101BT has an equalizer with 5 different sound presets. For an impressive playback of all A/V formats there is a

built-in high-efficiency 4 x 40 watt power amplifier. If that is not enough, you can connect an external amplifier to the 4.1 preamp output (3 volt).

The comprehensive Bluetooth section allows convenient hands-free calling. The outstanding voice quality combined with practical functions makes the X-101BT the perfect telephone manager: this includes the synchronization of up to 1000 phonebook contacts with 5 call numbers each, immediate access to all synchronized contacts, and direct dialling of 6 contact favorites. Thanks to A2DP it is easy to stream music from your mobile phone.

Among the most important features of the X-101BT is the ease of use. At the press of a button the motorized 16:9 TFT LCD touch panel extends out of the slot and impresses with its high brightness and stable picture quality. All settings can be readily controlled via the large 17.8 cm/7" touchscreen. Operation of all functions is intuitive via a user interface of modern design with clear menus; thanks to the high resolution of the display, the interface looks very three-dimensional and realistic.

Optimal in-vehicle integration is also taken care of. The tri-color button illumination means that the Xzent device is easy to combine with most vehicle makes and models. To adjust the screen to individual preferences you can choose between different wallpapers.

The features of the X-101BT are rounded off with a video output and an A/V input for the connection of other signal sources: for example an external monitor, games console, or rear-view camera. Using a CAN stalk interface available separately, Xzent's new multimedia expert can be effortlessly connected to the steering wheel remote controls of most vehicles.
